As tournament players, perhaps we sometimes feel pressured to make a move earlier in a poker tournament than we'd ideally like to. Maybe the situation is not perfect, but we've noticed the blinds-levels appear to be going up rapidly. Unless we take the current opportunity, we could easily end up becoming hopelessly short-stacked.

If we had the luxury of never needing to worry about running out of chips, perhaps we would have passed up on the marginal opportunity that faces us in favour of a much stronger situation. Unfortunately, this is not how tournament poker works. We can't go around playing individual hands in isolation. We have to seriously consider something that isn't a factor for cash game players - our tournament life.

The best decision at a tournament table is always going to take into account the effective stacks and the blind-levels. We are interested in how “healthy” our stack is relative to the blinds, which will help to dictate our strategy. If only there was a formula we could use to help us calculate this...

Actually, there is – it's commonly referred to as “M-ratio” or just “M” for short.

Table of Contents

M Ratio – The Calculation

The idea behind “M” is that it tells us how many rounds we will last given our current stack size and the size of the blinds/antes.

So let's see if we can calculate our M for a simple tournament situation.

Question – We haveR\$1,000 in our stack. The SB isR\$10, the BB isR\$20, and the antes areR\$1 and we are playing 10-handed. What is our M?

We simply need to add the relevant values to the formula. “Antes” stands for total antes that are played in a round and would, therefore, be calculated as:

Ante-price * number of players

We are interested in the amount we pay for antes in the entire orbit, rather than just the value of an individual ante. So in this case, if the value of an individual ante isR\$1 and we have to pay it ten times per orbit, we will pay a total ofR\$10 in antes each orbit.

$M = R\$1000 / (\$10 + R\$20 + R\$10)$

$M = R\$1000 / R\40

$M = 25$

An M of 25 essentially means that we can last another 25 orbits, assuming the structure of the hands remains the same. Which of course, it won't, because soon the next blind level will arrive and our M will become considerably reduced. So having an M of 25 in a regular tournament is not the same as having an M of 25 in an ultra-turbo tournament. The blind structure must be taken into consideration.

Using M Value to Make Decisions

We now have calculated our value for M, but on its own, it's not going to be especially useful. How can we use our value for M to help us define our strategy in a tournament setting?

In his book Harrington on Hold'em, Dan Harrington provided some rough guidelines for how we should evaluate and use our value for M. He defined several zones in which the value of M may fall, and described what our resulting strategic outlook should be.

M is greater than 20 – The Green Zone – With an M larger than 20 we typically have the luxury to choose whichever style we prefer, whether that be a conservative or aggressive style. We have enough time to be patient and wait for strong holdings, but we also have the freedom to dabble with more speculative hands and play aggressively. Taking some losses is not a huge problem at this stage, and the effective stacks are still deep enough that we can get away with expanding our range in some scenarios.

M is 10-20 – The Yellow Zone – Now we are starting to feel the time pressure a little bit. We must start looking for spots to get involved and play hands. Some of the more speculative poker hands we may have been able to play while in the green zone may now suffer from reduced playability. This reduction is a result of the smaller effective stacks.

M is 6-10 – The Orange Zone – The pressure tightens here, and we want to avoid wasting any chips. Cold-calling starts to become risky. Our main focus should be trying to be the first player involved in the pot, wherever possible. If we are the ones open-raising, we have increased expectation as a result of additional fold-equity. This is valuable here since every chip counts.

M is 1-6 – The Red Zone – We have now reached what is known as the push/fold stages of tournament poker. We only have two options at this stage: Move all-in or fold.

M is less than 1 – Dead Zone – We should avoid this particular zone at all costs. Nearly everything is dependent on luck at this stage. We want our tournament career to be about skill, not luck. We should look for a spot where we are first to act and shove all-in, hoping to get lucky. Players have gone on to win big tournaments even after arriving at the dead-zone, so not all hope is lost. In most cases, though, our tournament life is over.

Adjustment for Shorthanded Tables

The M calculation works for tables of all sizes. The number of orbits we have left, won't change hugely based on the number of players at the table. It will change slightly, since we will pay a different amount of antes, meaning we will have slightly more orbits remaining assuming the tables get shorthanded. (Usually the tables will get shorthanded only when approaching the final table. For the most part, we will be playing tournaments with max capacity).

But is having an M of 5 on a 5-handed table the same as having an M of 5 on a 10-handed table? Not really. Although the remaining number of orbits won't change that much, we will have twice as many opportunities to play hands on the 10-handed table.

To help us deal with this, we can make use of what is known as effective M, which takes into account the need to make faster decisions when the tables become shorthanded. We can refer to the standard value of the M calculation as simple M.

The relationship between the two is as follows:

Essentially, we are taking a percentage of Simple M based on how "full" the table is, assuming that a full table contains 10 players. So if a player has a simple M of 10 on a 5-handed table, then he has an effective M of 5.

Let's try a question to put everything together.

Question – Effective stacks are R\$1,000. Blinds are R\$20/40 with antes of R\$2. We are 5 handed. Calculate simple M and effective M.

Okay, hopefully, you should be able to do this on your own. The calculation is below:

Simple M

$$\$1000 / (\$20 + R\$40 + (\$2 * 5))$$

$$\$1000 / (\$20 + R\$40 + R\$10)$$

$$\$1000/R\$70$$

$$\text{Simple M} = 14.3$$

Effective M

$$14.3 * (5/10)$$

$$14.3 * 0.5$$

$$\text{Effective M} = 7.15$$

So the next time we are at the poker tables, let's try to be aware of our M-ratio. Use it to help define the strategy we will be using at any given stage of the tournament.

O jogo Aviator está disponível no site de apostas Betway? É uma pergunta comum entre os entusiastas de jogos de casino online. A resposta é sim, é possível jogar Aviator no Betway. Betway é um dos cassinos online mais populares e confiáveis hoje em amazon bet dia, e oferece uma ampla variedade de jogos de casino, incluindo o excitante jogo Aviator. Para jogar Aviator no Betway, é necessário ter uma conta de jogador ativa no site. Se você ainda não tem uma, é fácil criar uma conta – basta acessar o site do Betway e seguir as instruções para se inscrever. Um dos principais destaques do jogo Aviator no Betway é a amazon bet jogabilidade em amazon bet tempo real e a emocionante mecânica de jogo. O objetivo é adivinhar quando um avião voador irá descolar da tela, antes de atingir um pico de altitude pré-determinada e pousar. Quanto mais tempo você esperar para coletar suas ganâncias, maior será o pagamento potencial. No entanto, há também um risco maior de que o avião voe fora da tela antes que você consiga coletar quaisquer ganhos.

Outra vantagem de jogar Aviator no Betway é a amazon bet compatibilidade com dispositivos móveis. Isso significa que é possível jogar o jogo a qualquer momento e em amazon bet qualquer lugar, usando um smartphone ou tablet com sistema operacional iOS ou Android. Além disso, o Betway oferece aos jogadores uma variedade de opções de pagamento seguras e confiáveis, incluindo cartões de crédito, porta-s Safebreakers e carteiras eletrônicas como Skrill e Neteller. Em resumo, jogar Aviator no Betway é uma ótima opção para quem procura uma experiência de jogo emocionante e em amazon bet tempo real. Com amazon bet jogabilidade única e gráficos de alta qualidade, o jogo é fácil de aprender e oferece aos jogadores a oportunidade de ganhar grandes prêmios em amazon bet dinheiro. Se você ainda não tentou jogar Aviator no Betway, é hora de se inscrever e começar a jogar!

Vitória de Pablo Castrillo no palco 12 da Vuelta a España

Pablo Castrillo venceu a etapa 12 da Vuelta a España, superando o terreno montanhoso no noroeste da Espanha na quinta-feira.

O espanhol de 23 anos adiantou-se no final após um ataque impressionante a 10 km do fim e já havia estabelecido uma vantagem de meio minuto sobre o grupo principal de perseguição, liderado pelo ciclista britânico Max Poole, a 4 km do fim.

Castrillo (Equipo Kern Pharma) manteve uma distância do grupo de quatro atrás dele durante a

parte final da brutal subida. Nos últimos 100 metros, percebendo que garantiria amazon bet primeira vitória amazon bet uma Grande Volta, sorriu.

"A fuga foi muito difícil de ser feita. Os outros caras eram muito fortes. Eu estava nervoso para o final, mas decidi atacar na parte plana e isso me levou à vitória na etapa", disse Castrillo. "Eu pensei amazon bet atacar com sete ou oito quilômetros para o fim, mas vi os outros caras se olhando uns aos outros, então fui com 10 km."

A emocionante vitória de Castrillo veio no dia amazon bet que foi anunciado que o antigo presidente da equipe Kern Pharma, Manolo Azcona, havia morrido após uma doença. "É incrível", disse o vencedor da etapa. "É pela equipe e é pela equipe."

Poole (Team dsm-firmenich-PostNL) se desengatou do grupo perseguidor nos momentos finais, com o ciclista de 21 anos garantindo o segundo lugar no topo da Montana de Manzaneda. O espanhol Marc Soler (UAE Team Emirates) terminou amazon bet terceiro.

Classificação Geral

Posição Ciclista	Equipe	Tempo
1	Ben O'Connor Decathlon-AG2R-La Mondiale	47h 20' 38"
2	Primoz Roglic Red Bull-Bora-Hansgrohe	47h 23' 54"

Ben O'Connor manteve a liderança na classificação geral, terminando amazon bet 14º lugar na etapa. Ele manteve seu principal rival Primoz Roglic (Red Bull-Bora-Hansgrohe) à distância, mantendo uma diferença de três minutos e 16 segundos. "Foi um início difícil, na verdade foi muito difícil", disse o ciclista australiano Decathlon-AG2R-La Mondiale. "E então nós [a equipe] apenas controlamos a corrida, aumentamos o ritmo na subida final."

A etapa 13 de sexta-feira é outra batalha nas montanhas, com quatro subidas classificadas no percurso de 176 km de Lugo a Puerto de Ancares.
